

Special Notice for Availability of Unregulated Contaminant Monitoring Data

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

Availability of Monitoring Data for Unregulated Contaminants for the City of Rawlins.

Our water system has sampled for a series of unregulated contaminants. Unregulated contaminants are those that don't yet have a drinking water standard set by EPA. The purpose of monitoring these contaminants is to help EPA decide whether the contaminants should have a standard. As our customers, you have a right to know that these data are available. If you are interested in examining the results, please visit www.rawlinswy.gov/watertreatment or contact Bud Dimick or Stevie Osborn at 307-328-4564 or PO Box 953, Rawlins, WY 82301.

This notice is being sent to you by the City of Rawlins State Water System ID: WY5600045

Date distributed: 11/27/2024

The City of Rawlins has performed extra tests on our water as a trial location for the EPA. These are tests for substances which are not required to be tested normally. Want to read all the results? Visit www.rawlinswy.gov/watertreatment or call 328-4564.

3rd Annual Reverse Advent Calendar

Donate items at the Rawlins Police Department to support Stepping Stones, WyoHelp, Head Start, Boys & Girls Club, Rawlins Elementary, Mike's Toy Drive, Carbon County Libraries, Rawlins Animal Shelter, Little Free Pantry, COVE, and Senior Center.

For full list, visit www.rawlinswy.gov/schcc

Rawlins' New Flood Hazard Area

The City of Rawlins has updated our website about the newly declared Flood Hazard Area on south side, typically known as a floodplain. Visit www.rawlinswy.gov/fema for:

Why does Rawlins now include a floodplain?

What has the city done about the new floodplain?

What other options did the City have?

What if the floodplain is not reduced through the study?

Will properties be required to purchase insurance?

Can property owners eliminate their insurance requirements?

What other effects will this have on properties?

Where can I find more information, including the map?

Please contact your mortgage holder for more information on your property's potential insurance requirements. If you have further questions, please contact Mira Miller, Community Relations/PIO, at 307-328-4500 ext. 1022.

CLEAR THE FOG

FATS, OILS, GREASE

Fats, Oils and Grease (FOG) come from food preparation and kitchen clean-up. FOG may look like liquid when drained, but it solidifies when discharged into the sanitary sewer. This results in clogged drains and sewage backups, potentially damaging personal property.

MYTH

FACT

I can pour grease down the drain if I run hot water with it.

Grease poured down the drain, even with hot water, will eventually cool and solidify in the sewer pipe.

I can scrape kitchen waste down the drain if I use the garbage disposal.

The garbage disposal only grinds up items before discharging them to the sewer system but does not eliminate FOG.

Pouring grease down the drain with dish soap will completely dissolve the grease.

Most dish soaps break up grease, but once cooled, the grease will still solidify in the sewer system.

I can discard grease in my tub, shower, or toilet.

FOG poured in a bathtub, shower, or toilet will end up in the same sewer system that the sink drains to and may cause damage.

WHAT SHOULD I DO?

- Wipe loose food and grease from dishes before washing them in the sink.
- Scrape food scraps into a garbage can or compost bin.
- Pour all grease and cooking oil into a covered container and dispose of it in the garbage.
- Clean grease with absorbent materials, like paper towels, and then throw the material in the garbage.
